

Update from the Solid Waste Office

The new City / Reading School District recycling program is now in full swing. With the cooperation of the schools, the amount of recyclable materials diverted from the waste stream is growing significantly thereby reducing the amount of trash going to landfills and increasing the revenue received. The installation of four solar powered Big Belly trash/recycling receptacles is now complete and we will be monitoring the effectiveness of this pilot program. We continue to assist Wood to Wonderful with their 'CanIt' placement. These attractive containers have become very popular and reduce the amount of litter in our neighborhoods.
