

Wyomissing Park Street Light Options

November 2012

Background

Wyomissing Park Street Lighting consists of two circuits of series circuit streetlights built ca. 1920. Circuit 19 on the Museum side of Museum Road has 20 lights, and Circuit 24 across Museum Road has 32 lights.

Met-Ed has repaired and maintained these lights for as long as possible, but the technology can no longer be supported. The circuits have become more and more unreliable and circuit 19 has been shut down entirely for safety reasons. Even though the bulbs for these lights were to be phased out by 2014, our vendors have already stopped production, and replacements are no longer available for the remaining standards.

Options available based on Met-Ed's tariff*:

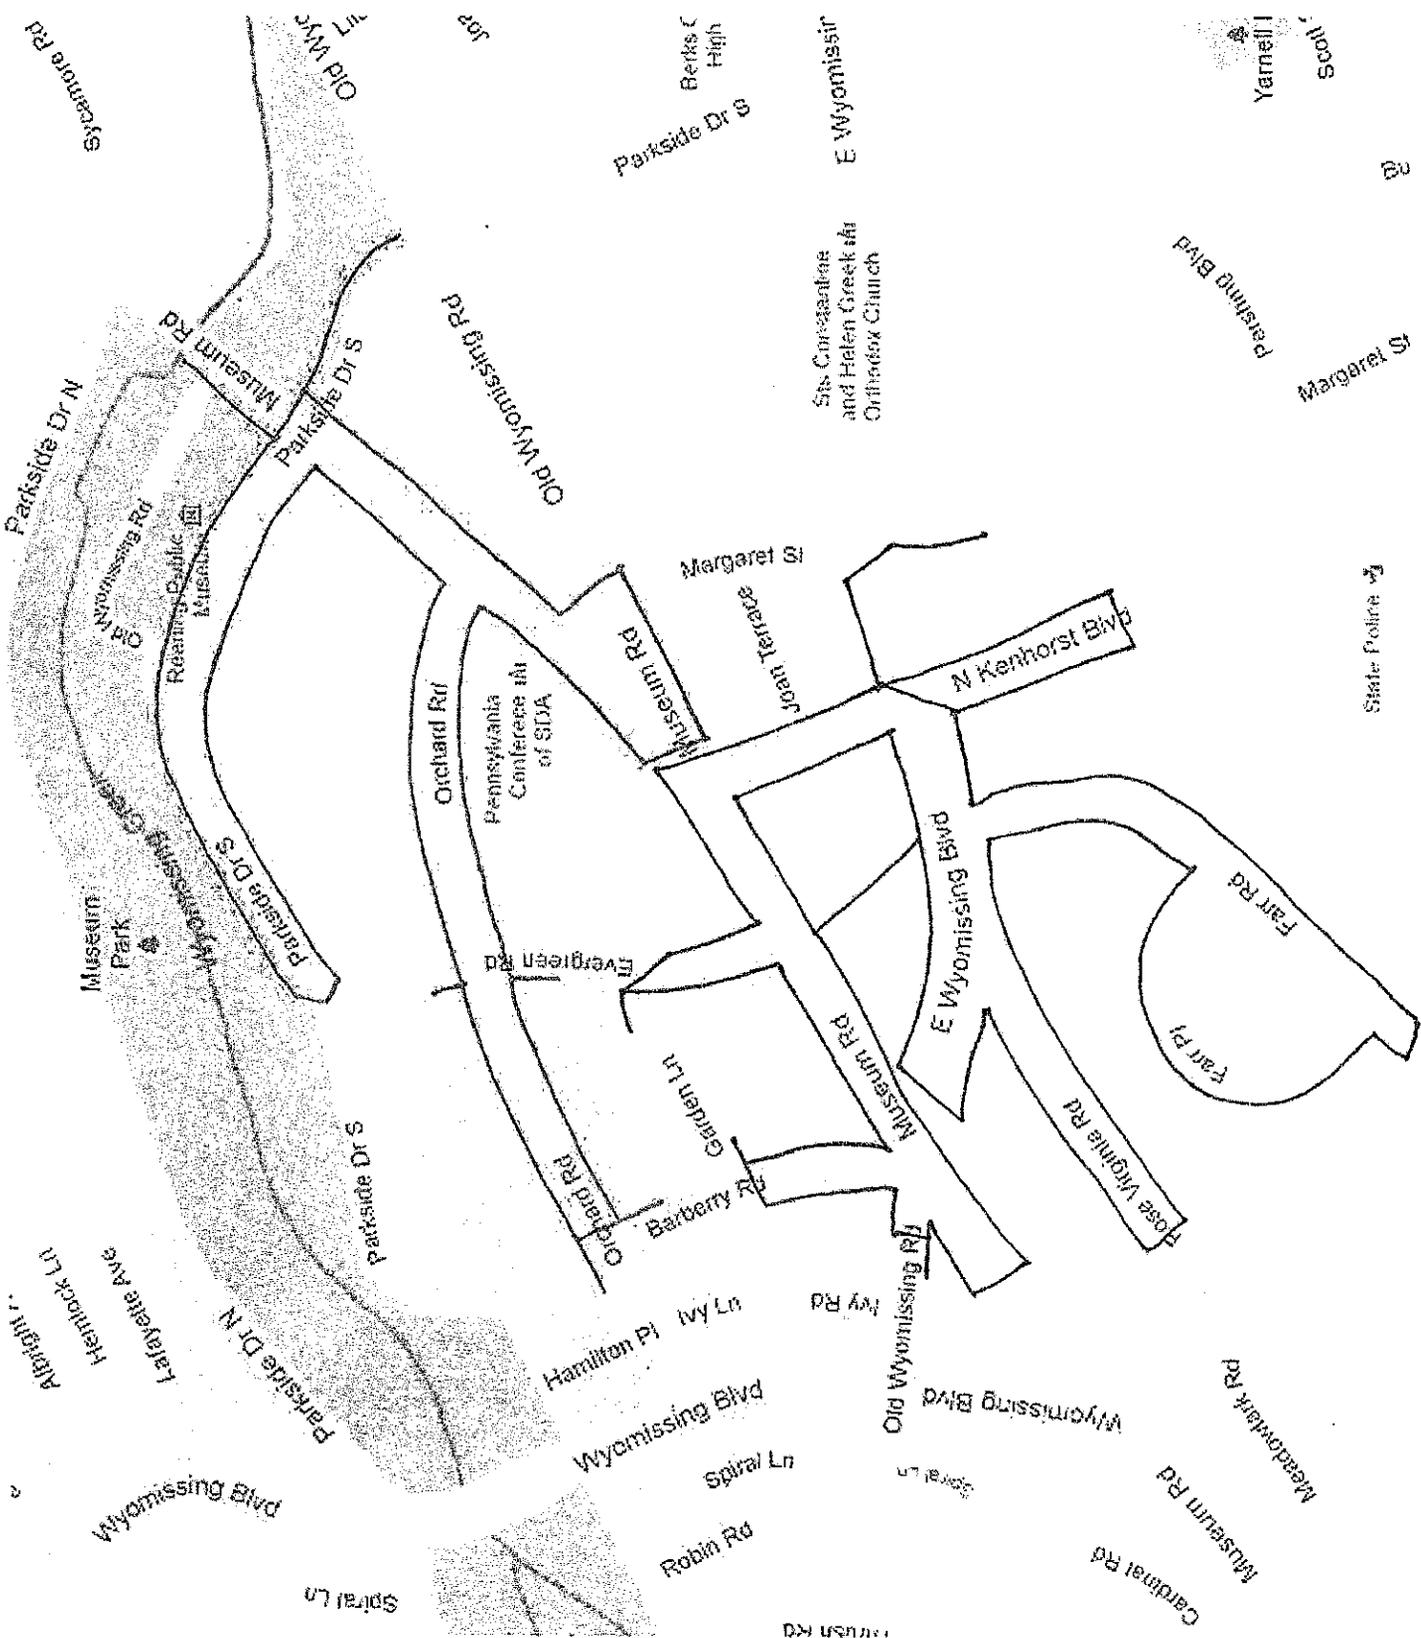

- Overhead – would require significant tree trimming
- Underground – would require trenching
 - City owned/Unmetered
 - City owned/Metered
 - Met-Ed Owned
- Resident Owned

Considerations

- Overhead or Underground system
- Number of lights
- Wattage (brightness) of lights
- Technology (color and efficiency) of lights
- Style of light fixture and standard
- Cost

*What is a Tariff? A tariff is filed with and approved by the Pennsylvania Public Utility Commission. Tariffs are used by utility companies to define what services are supplied, and the rates for those services. A copy of Met-Ed's Tariff can be found at our website:
